

31 Aug discussion

What is missing

- Look at realistic opportunities – sand storage/ mining
- Not gully control – integrated watershed management
- Story of the quarry – to pay for water
- Communities

Stakeholders

- Exhaustive list, but government has to play facilitative role mainly
- Universities: capacity building, awareness, research, et
- Look at land tenure: very decisive, clans have a large role
- Are their local water users association that are involved or can be involved – not yet on watershed level (more on irrigation)
- What are mechanism are their for stakeholder coordination or land use planning that we can use – is not there yet, but clans can play a role (good experience in Borana)

Coordination and cooperation

- Steering committee and technical task force
- MoU related to this challenge between main stakeholders (what does everyone contribute, how and when)
- Come to a systematic approach – engage in pre-treatment, treatment and post-treatment
- Identify lead agency

How to prepare for DREAM2

- It is Jigjiga's central concern
- Stakeholders are from Jigjiga – they have the leadership and come to solutions
- Select appropriate topics
- Get experienced speakers, using local knowledge
- Learn from good practice
- Lead by Jigjiga University and Somali Government
- Involve media to create awareness
